

Fire points are well established concepts in terms of protecting High-Risk area. Any industry / High-rise buildings / under construction sites do always have high-risk areas such as Generators, Panel rooms, Battery rooms , HSD , Solvent , Chemical storages , Processing areas, Furnaces , Boilers and Annealing areas, etc.

In under construction sites / buildings when different hot works are going on and the firefighting systems are not in place , RESGUARDO - Fire points can always make the difference
